COCOA BEANS  
FCB 1-65  
March 1965

✓ RECORD WORLD

COCOA BEAN CROP

## Summary

The 1964-65 world cocoa bean crop is now estimated at 1,481,000 metric tons, 18 percent above the record 1963-64 outturn and far in excess of 1965 world consumption requirements. Favorable weather and more care in pest control in Africa has boosted that area's production well over 1.1 million tons -- exceeding total world production in 1961-62. Latin American production is expected to be up 5 percent over last season and additional acreage coming into bearing in New Guinea is expected to maintain the upward trend in output for the Asia-Oceania area.

Mounting supplies and financial difficulties have forced the Cocoa Producers Alliance (comprised of Ghana, Nigeria, Brazil, Ivory Coast, Cameroon, and Togo, and producing over four-fifths of the world crop) to reenter the cocoa market in early February after a 14-week period of suspended sales. The Alliance withdrew from selling in mid-October after prices fell below the "indicator" level of 23.75 cents per pound. Current prices still remain well below the indicator level as the record crop, together with large inventories in consuming countries, have had a detrimental effect on the Alliance's endeavor to control cocoa prices.

New York Spot prices for "Accra" cocoa averaged 23.4 cents per pound in 1964, about 2 cents below the previous year's average, but still above the 1962 level of 20.8 cents. January and February (1965) average prices declined further to

---

This circular contains more detailed information than the summary of similar title published in the World Agricultural Production and Trade Statistical Report of February 1965.

1/ Estimates are based on a crop year of October 1 to September 30. 2/ Includes Dominica, Guatemala, Guadeloupe, Martinique, Nicaragua, and St. Lucia. 3/ Beginning with 1961-62 includes former British Southern Cameroons. 4/ Prior to 1961-62 includes former British Southern Cameroons. 5/ Includes some Ghanaian cocoa marketed through Togo.

22 and 20.7 cents, respectively. Daily quotations at the close of February are near 18.5 cents per pound.

North America: Production in North America is estimated at 94,300 tons, up 7 percent over the 1963-64 outturn. More favorable weather has resulted in moderate increases in almost all producing countries of this region.

Costa Rican production is placed at 12,000 tons, slightly above the 1963-64 outturn. Exports of cocoa beans during January-July 1964 totaled 4,275 tons, compared with 4,560 tons for the similar 1963 period. Most of the shipments went to the United States.

Output in the Dominican Republic is estimated at 40,000 tons, up 3 percent over the previous season. Exports during the 1962-63 and 1963-64 (October-September) crop years are shown below:

	1962-63		1963-64	
	Metric tons	Million dollars	Metric tons	Million dollars
Cocoa beans .....	23,892	10.9	22,342	9.3
Cocoa butter .....	2,160	2.4	1,757	1.9
Chocolate .....	5,203	3.0	7,686	4.2
Cocoa cake .....	4,046	.2	2,826	.3
Total .....		16.5		15.7

A new chocolate confectionery factory is to be built in the Jamaican town of Highgate, Parish of St. Mary. Initial cost will be \$420,000, and of this investment approximately 60 percent will be undertaken by local businessmen, the balance by a Canadian firm. The factory will use only domestically-produced cocoa beans and will manufacture a variety of chocolate candies.

Mexican production is expected to be 14 percent above the small 1963-64 harvest. Exports of cocoa beans during the first 10 months of 1964 amounted to only 3,362 tons, down sharply from the 15,277 tons shipped during the corresponding period the year before. The decline is attributed in part to reduced supplies as a result of a smaller 1963-64 crop and to rising domestic consumption.

South America: The South American crop is placed at 214,600 tons, a gain of 4 percent over the previous year. Although production is up for the second consecutive season, output is still well below the 1955-59 average of 237,700 tons.

The Brazilian crop is estimated at 132,000 tons, up slightly from the previous season. The Bahia main crop totaled 900,000 bags (54,000 tons), approximately the same as in the previous two seasons. The temporaõ crop is forecast at 1,200,000 bags (72,000 tons), compared with last year's crop of 1,150,000 bags (69,000 tons). Production from other States usually amounts to 100,000 bags (6,000 tons).

As a result of the Government's decision to abolish the 7 percent state export tax exemption for cocoa products and with the Alliance's ban on sales, several cocoa processing factories temporarily reverted to crushing castorbeans while others shut down all operations. Reportedly, an estimated 250,000 bags (15,000 tons) of cocoa beans have deteriorated below export quality because of lack of adequate storage facilities and government financing is being sought to process the tonnage into cocoa products.

Production in Ecuador is estimated at 39,000 tons, up 11 percent over the small 1963-64 crop which was reduced by heavy infection of "monilia" pod-rot. In its effort to industrialize, Ecuador is planning to build a \$9 million cocoa processing facility near Guayaquil. In addition, an established chocolate confectionery firm in that city is planning to invest \$540,000 for the processing of 3,000 tons of cocoa products annually.

Exports of cocoa beans during 1964 totaled only 26,821 tons, 24 percent below the previous year and lowest level since 1958. Shipments to European markets declined only slightly, while exports to the United States, of 7,706 tons, were less than one-half the 1963 level. However, continued increased buying by Colombia has made it Ecuador's largest customer in 1964.

More recent information shows Venezuelan production to be increasing at a faster rate than previously reported. The 1963-64 outturn of 19,600 tons was the largest in 14 years. A combination of continued favorable weather and new plantings coming into bearing in the States of Barinas and Portuguesa is expected to result in an even larger crop this season. Plans are being formulated to open new cocoa areas south of Lake Maracaibo in the State of Zulia.

Exports of cocoa beans during the first 10 months of 1964 totaled 11,206 tons, compared with 11,005 tons for the similar 1963 period. The United States took 6,274 tons, and Belgium, West Germany, and Switzerland bought most of the remainder. Sales to Eastern Europe was limited to only 210 tons which went to Czechoslovakia.

Africa: African production is expected to be up almost 23 percent over last year's record outturn and more than double the 1955-59 average. Record crops in Ghana, Nigeria, and Ivory Coast have raised African production to over 1.1 million tons, exceeding total world output in the 1961-62 season. The drier weather this season -- reportedly similar to 1960-61 -- has greatly reduced pod-rot losses and has made spraying for capsid control more effective. Most major producing countries of this area have built new storage sheds and/or expanded existing facilities; some have also opened new cocoa-processing factories. African cocoa product exports are expected to be up sharply this year.

Production in Cameroon is expected to approximate the record 1963-64 harvest of 90,000 tons. Increased spraying for pod-rot control has resulted in greatly increased yields in trial areas. Efforts are being undertaken to make fungicide spraying more widespread since pod-rot takes a heavy annual toll.

A new cocoa processing plant is being considered at Yaounde. The proposed facility will be built by Japanese interests and will have approximately the same capacity (15,000-20,000 tons) as the Douala factory. The Douala plant processed 13,000 tons of cocoa beans last year and is expected to utilize about 15,000 tons in 1965. Exports of cocoa butter and cocoa cake during 1963 totaled 4,754 tons and 5,198 tons, respectively, over 25 percent more than 1962 shipments.

East Cameroon's exports of cocoa beans during 1963 totaled a record 71,236 tons. EEC countries (particularly Netherlands and France) bought nearly 67,000 tons or 94 percent of the total; most of the balance went to the United States and the United Kingdom. Exports during January-July 1964 amounted to slightly over 40,000 tons, 6 percent under those of the corresponding 1963 period.

Political instability is expected to result in a further decline in Congo's (Leopoldville) production this season. Although the plantations are reported to be in good condition, labor and transportation difficulties are expected to retard output for some time. The Congo has a small cocoa products factory in Elisabethville that utilizes about 240 tons annually in manufacture of chocolate confectioneries.

Ghanaian production is expected to reach a record 570,000 tons this season. The main-crop harvest through February 18 totaled nearly 530,000 metric tons, well above total production of any preceding year. Beginning with the 1965 mid-crop, growers will receive 11.66 U.S. cents per pound, compared with the current level of 12.6 cents. The United Ghana Farmers' Cooperative Council announced that the "voluntary" contribution of 0.94 cents per pound will go towards a trust fund to further the establishment of the proposed Agricultural Credit and Cooperative Bank.

The new Takoradi cocoa processing plant began operations last November and reportedly has an annual capacity of about 18,000 tons. The larger-capacity Tema factory and storage complex is scheduled to begin limited operations in April. Upon final completion, this new plant will be able to store approximately 150,000-200,000 tons of cocoa beans and will have an annual processing capacity of between 50,000 to 85,000 tons.

Cocoa bean exports during 1964 totaled 387,610 tons, compared with 411,037 tons the previous year. The decline is attributed to suspension of sales in mid-October which resulted in sharply curtailed exports during November and December. "Token" burnings of low-grade stocks took place in December, but this had little effect in bolstering prices. Following the lifting of the Alliance's ban on sales, Ghana sold 60,000 long tons of main-crop cocoa to the USSR, bringing total 1964-65 sales to the Soviets to 71,000 tons, against 36,000 tons during all of last season.

Production in the Ivory Coast is estimated at a record 135,000 tons, 39 percent over the 1963-64 harvest. The country's first cocoa processing plant began operations in November. The new factory will utilize approximately 10,000 tons

to 12,000 tons of cocoa beans annually, and will produce cocoa butter and cocoa cake for export.

Exports of cocoa beans during January-September 1964 totaled 58,097 tons, compared with 57,216 tons during the corresponding 1963 period. Of this 9-month 1964 total, the EEC bought 46,200 tons and the United States 8,918 tons. About 10,000 tons of 1964-65 main-crop cocoa has been sold to the USSR, the first transaction since 1960.

Nigeria's crop is expected to reach 270,000 tons, 50,000 tons above last year's record. The drier weather this season has greatly reduced the incidence of pod-rot and capsid damage is reported to be light. The Nigerian farmer's price, of 15 U.S. cents per pound for Grade 1 cocoa, is considerably above that paid to growers in Ghana and in the Ivory Coast.

The \$5.6 million facilities, at Ikeja, for cocoa storage, handling, and fumigation is being rushed to completion to facilitate the handling of the unusually large harvest. Two of the proposed 6-shed complex (each with a capacity of 12,000 tons) have been completed and are in use, and construction has been accelerated on the remaining 4 sheds. Plans are still being formulated to construct a \$14 million cocoa processing factory in the Western Region.

Exports of cocoa beans during the first 10 months of 1964 amounted to 180,500 tons, up about 34,500 tons over the similar period the previous year, and exceeding annual shipments for 1963 by approximately 3,000 tons. Exports to the EEC (mostly to West Germany and the Netherlands) were up sharply, while shipments to the United States declined for the third consecutive year.

Sales of 1964-65 main-crop cocoa to the USSR immediately following the Alliance's ruling to reenter the market, totaled a record 16,000 tons, and purchases by other Bloc nations amounted to an additional 4,000 tons. Sales last season to the USSR amounted to only about 2,000 tons and were the first to take place since Nigeria received its Independence in 1960, when the Soviets bought over 9,500 tons.

Asia and Oceania: Production continues to increase in this region. The 1964-65 crop is estimated at 31,600 tons, 7 percent above the previous season and more than double the 1955-59 average.

Production in New Guinea and Papua is expected to increase to 19,000 tons, up 2,000 tons over last season's outturn. The government is predicting a crop of 30,000 tons by 1966-67. Exports during January-November 1964 were 14,313 tons, 3 percent ahead of the similar 1963 period. Australia was the largest recipient of New Guinea's cocoa in 1964. The United Kingdom, the Netherlands, Belgium, and the United States were also important markets.

Cocoa Producers Alliance: At the close of the January 25-27 meeting of the Cocoa Producers Alliance at Lagos, Nigeria, members announced that 250,000 tons of cocoa beans would be diverted from traditional uses and that negotiations had been undertaken to sell cocoa to the margarine and soap industries at prices competitive with those of other fats and oil products. However, the Alliance would have to sell cocoa beans at about five cents per pound in order to compete with other fats and oil sources. Reportedly, only small shipments have been made for trial runs and testing.

The Alliance's cocoa bean trade during 1963 (the last period where complete data were available), totaled 838,359 tons. The EEC took 351,208 tons or 42 percent; and the United Kingdom 107,630 tons or about 13 percent. Shipments to the Sino-Soviet Bloc totaled 86,544 tons, making up 10 percent. The United States was the largest single recipient with 198,981 tons, or about 24 percent of the total.

United States imports of cocoa beans in 1964 continued to decline (from the alltime high of 1961) for the third consecutive year -- falling to 270,760 tons, 15,328 tons below 1963. However, imports were ample to meet U.S. grind requirements, which amounted to 266,533 tons in 1964. Larger shipments from Ghana raised imports from Africa slightly, while sharply curtailed tonnages from Mexico and Ecuador dropped imports from Latin America 22 percent. Despite the ban on sales during most of the fourth quarter of 1964, the Cocoa Producers Alliance supplied 209,448 tons, or 77 percent of U.S. cocoa bean imports, compared with 199,996 tons or 70 percent during 1963.

Imports of cocoa powder and chocolate were up slightly in 1964, while cocoa butter imports declined 19 percent because of smaller shipments from Brazil and the Dominican Republic.
